

DECK · TRADING IA

One brain deciding with this minute's market

A quantitative system for spot and futures trading on
your own exchange accounts.

Presentation · 08 September 2026

01 · THE THESIS

One reading. Three defenses.

291 signals read every five minutes.
The brain ranks flows, derivatives, on-chain, macro and technical data.
Defenses turn that reading into controlled orders.

02 · EXECUTION ARCHITECTURE

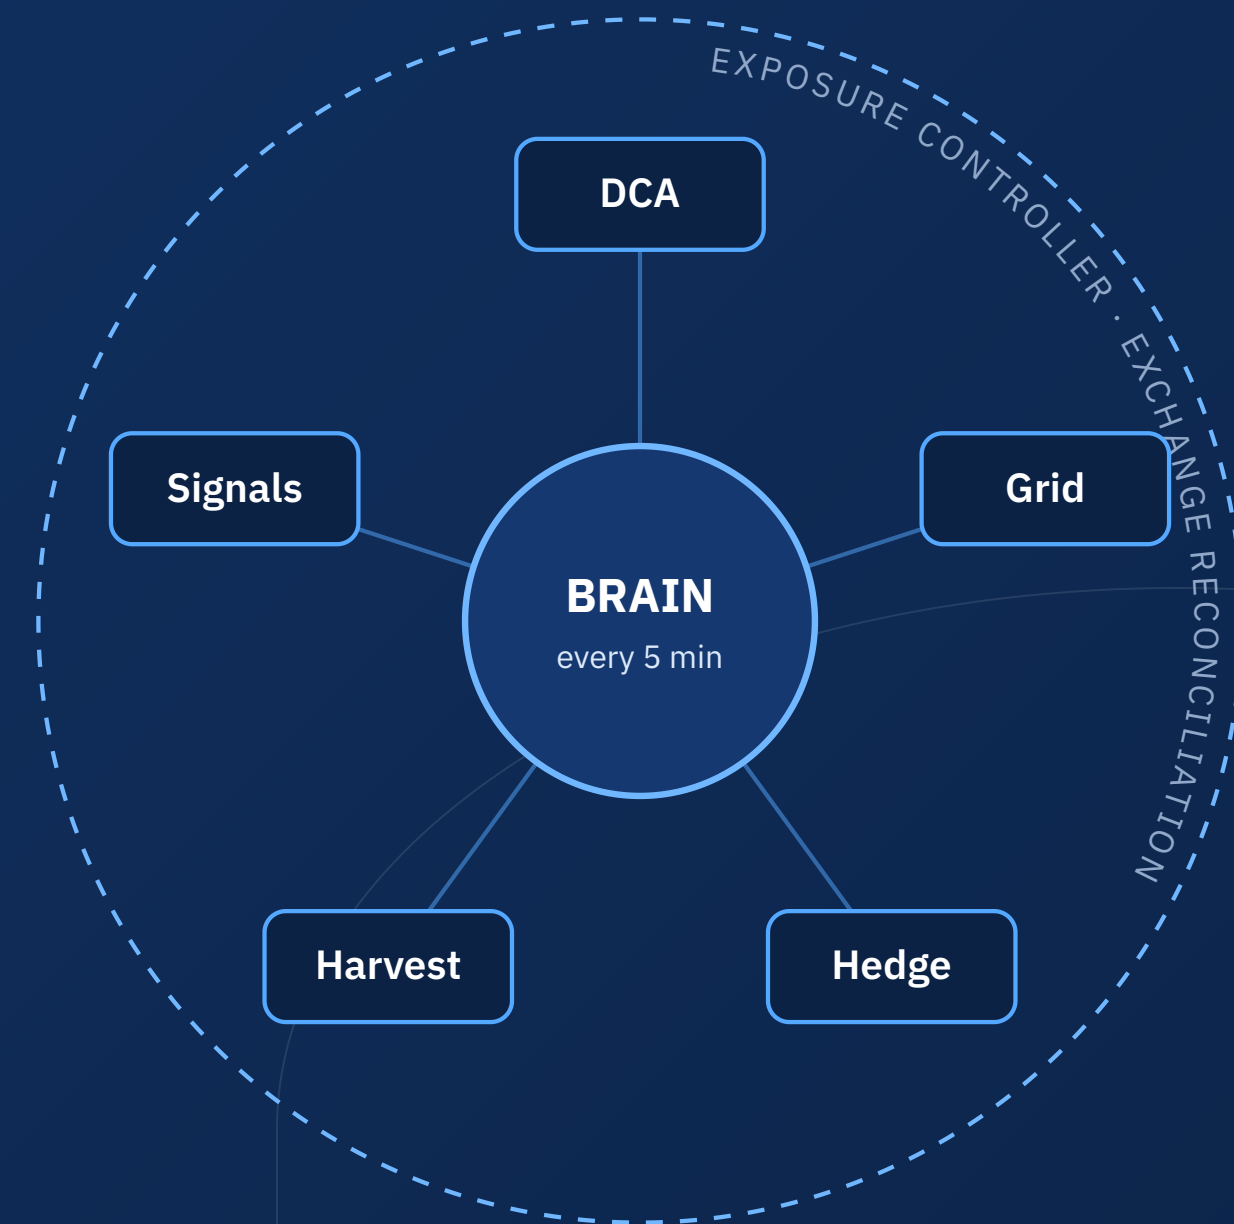

Five engines. One brain.

DCA · grid · hedge · harvesting · signals

One controller caps each engine's exposure and reconciles balances and fills against the exchange.

Operational watchdog: restarts stopped processes; 99.9% availability target.

The decision is shared; execution stays traceable.

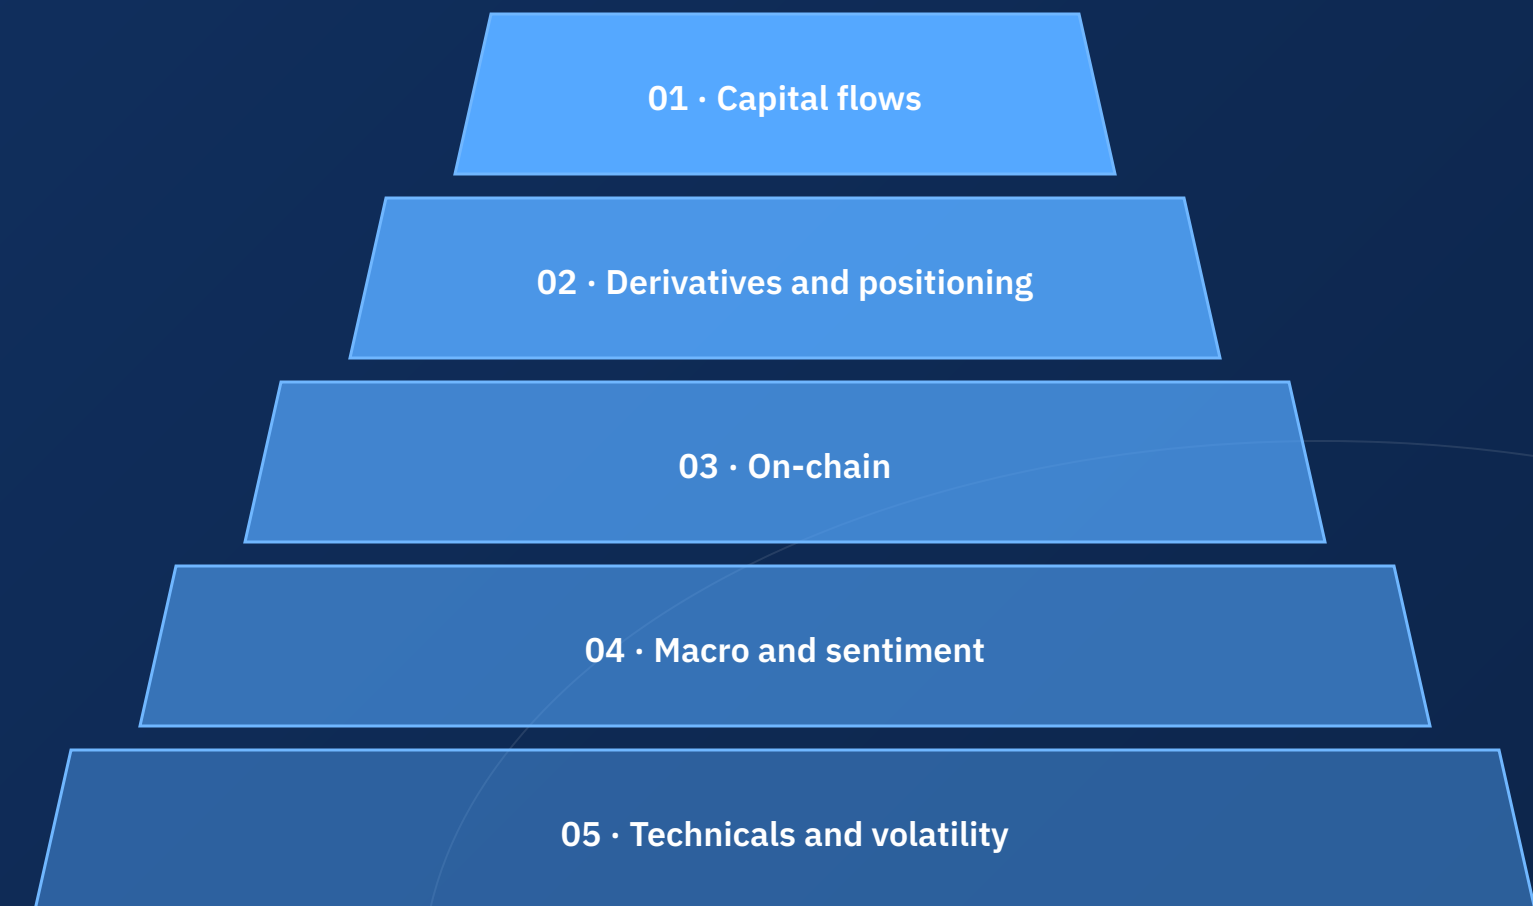

03 · HOW IT DECIDES

The hierarchy stops a good-looking story from becoming a trade.

- 01 · Capital flows
- 02 · Derivatives and positioning
- 03 · On-chain
- 04 · Macro and sentiment
- 05 · Technicals and volatility

Money leaving outweighs an oversold oscillator.

Money leaving outweighs an oversold oscillator

04 · SPOT AND FUTURES

Two instruments. Two rules.

SPOT · entries and exits with limit orders · no mechanical stop-loss
FUTURES · hedging and directional positions · stop-loss and take-profit registered on the exchange

Nothing closes at market. Each exit respects the instrument.

◆ SPOT

Entries and exits with limit orders

No mechanical stop-loss: signals decide

Harvest when the position is in the green

◆ FUTURES

Hedging and directional positions

Stop-loss and take-profit on the exchange before opening

Stop tightens in your favor

05 · DEFENSES

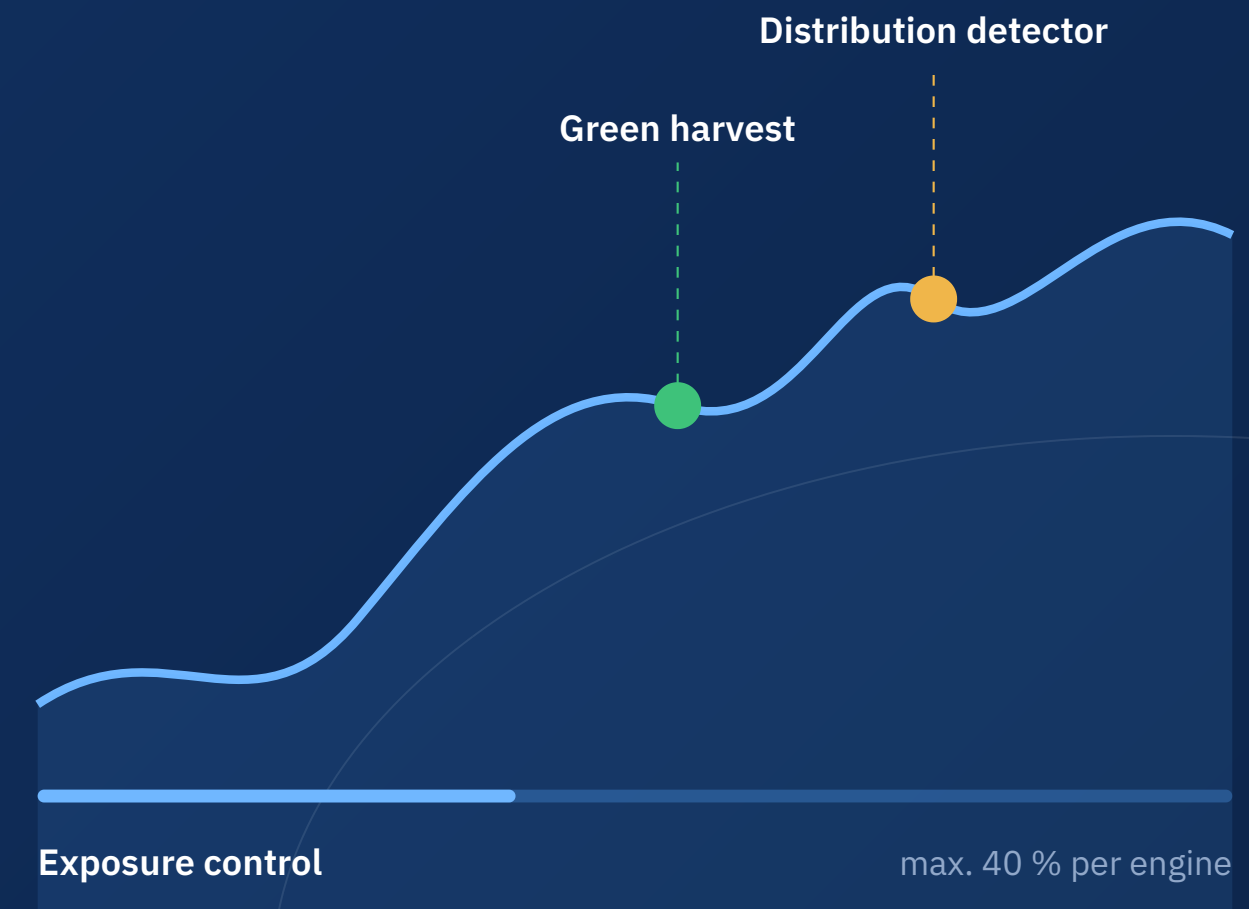

Protect capital before chasing the last tick.

Distribution detector · slows buying as the market deteriorates

Green harvesting · takes favorable positions off the table

Exposure control · limits size and concentration

Defenses describe the present; they do not promise to predict the future.

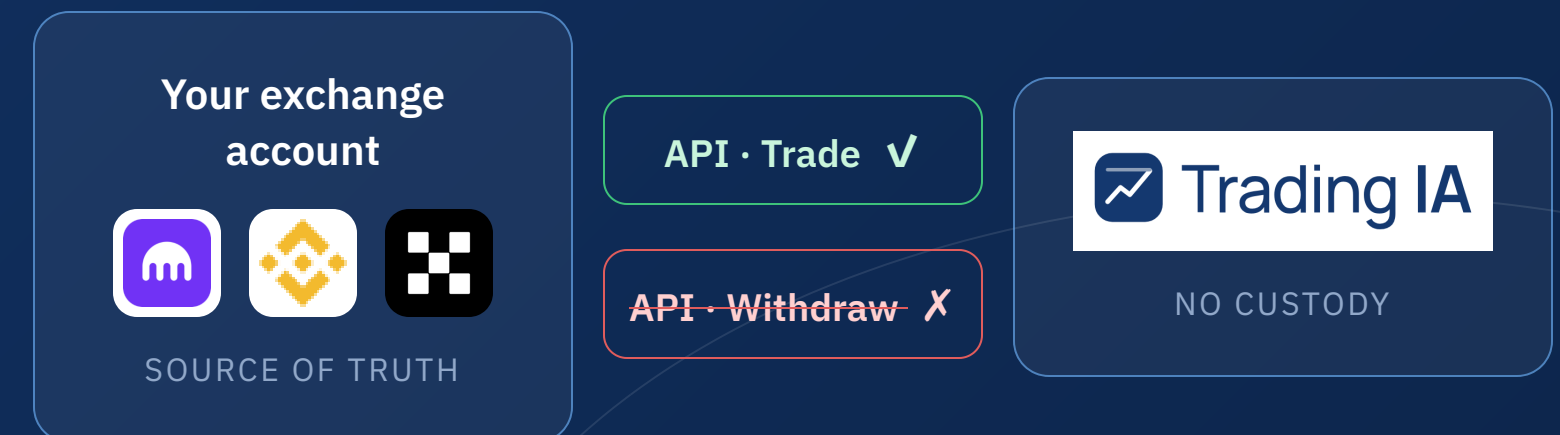

06 · CUSTODY

Your keys. Your account. Your funds.

API connection with trading permission and no withdrawal permission.

Trading IA never custodies, transfers or moves your funds.

The exchange is the source of truth.

07 · EXCHANGES AND ASSETS

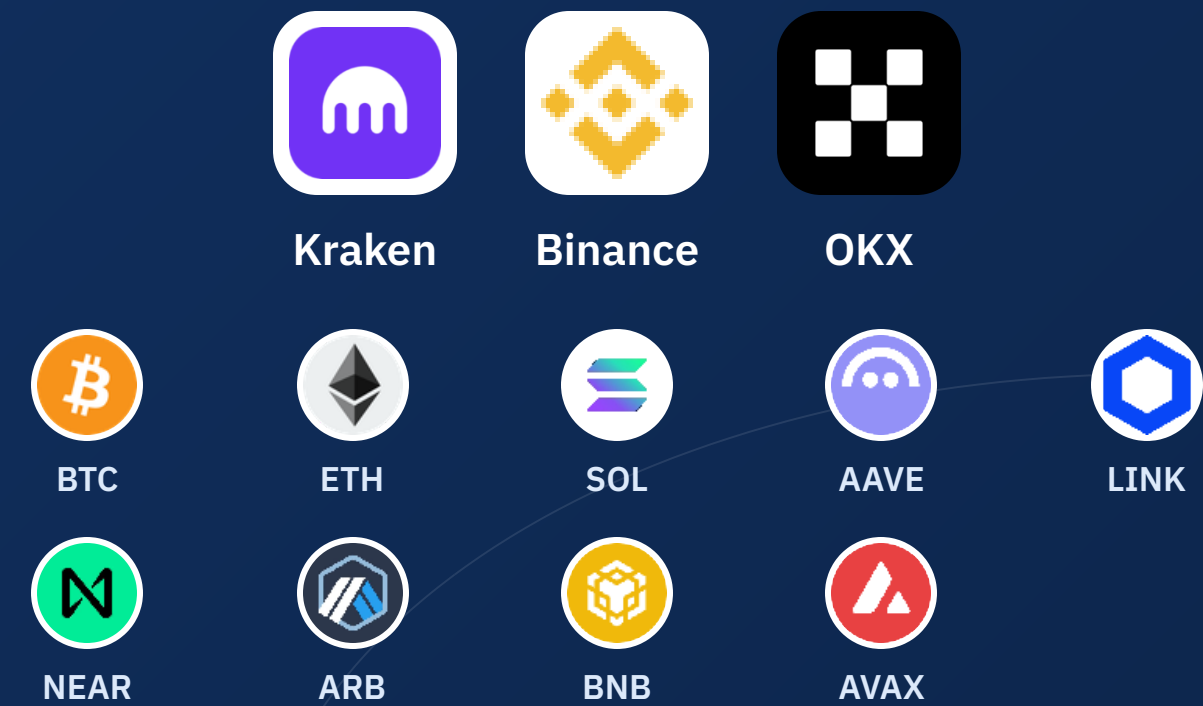

One decision layer across your venues.

Binance · Kraken · OKX

Spot across the assets supported by each account.

Futures on BTC, ETH and SOL where the exchange supports them.

Balances and fills are read against the corresponding exchange.

Spot on all nine · futures on BTC, ETH and SOL

08 · SIGNALS API

The brain's reading, over HTTP.

One request returns the complete reading from the latest cycle.

GET /v1/signals/BTC · Authorization: Bearer <key>

FREE US\$0/month · composite score, Fear & Greed and RSI 1H

STARTER 9 · 20 technical signals, funding and open interest

PRO 49 · on-chain, macro and liquidation map

ENTERPRISE 99 · brain mode, ETF flows and whales

Requests/minute: 1 · 10 · 60 · unlimited. WebSocket: PRO and

Enterprise.

```
GET /v1/signals/BTC
Authorization: Bearer <key>
```

```
{ "asset": "BTC", "cycle": "5m",
  "composite_score": 47, "bias": "NEUTRAL",
  "rsi_1h": 40.5, "fear_greed": 70,
  "funding": 0.0045, "brain_mode": "balanced" }
```

FREE

0 US\$/mo

STARTER

9 US\$/mo

PRO

49 US\$/mo

ENTERPRISE

99 US\$/mo

1 · 10 · 60 · unlimited requests/min · WebSocket on Pro and Enterprise

Every plan uses the same response format; depth and request frequency change.

09 · PROGRAM AND TIERS

Choose how you work with Trading IA.

Want these signals in your own tools? We connect them through an API.

Signals API · Free US\$0/month · Starter US\$9/month · Pro US\$49/month · Enterprise US\$99/month

Management · Starter US\$0/month + 25% · Pro US\$99/month + 20% Premium US\$199/month + 15% · Elite US\$299/month + 12%

Terms and scope are explained before an account is connected.

Signals API

Free	0 US\$/mo
Starter	9 US\$/mo
Pro	49 US\$/mo
Enterprise	99 US\$/mo

Management

Starter	0 US\$/mo + 25 %
Pro	99 US\$/mo + 20 %
Premium	199 US\$/mo + 15 %
Elite	299 US\$/mo + 12 %

+ % on realized profit

10 · OPERATING FIGURES

We measure the system by how it works.

- 291 signals per cycle
- Reading every five minutes
- Limit orders for entries
- Futures stops registered at the exchange
- Panel with activity, balances and traceability
- Per-engine cap: no engine exceeds 40% of the account.

No returns, price targets or projections.
